Doctor's appointment

Tech Stack: Flask, Python

Database: SQLAlchemy

Modules to install: flask, flask_sqlalchemy, requests

Steps to run:

1. Create virtual environment: "python -m venv venv".
2. A folder called "venv" will be created after running above command.
3. Open terminal in the folder "venv" created and run the below three commands:
   a. Scripts\activate
   b. pip install flask
   c. pip install flask_sqlalchemy
   d. pip install requests
4. Add the source code[app.py] in the venv folder.
5. Run the app using the command: "flask run"

The app will run on localhost port: 5000
